Octave Quick Reference Octave Version 3.0.0

Starting Octave

octave start interactive Octave session octave filerun Octave on commands in file octave --eval code Evaluate code using Octave octave --help describe command line options

Stopping Octave

quit or exit exit Octave

INTERRUPT (e.g. C-c) terminate current command and

return to top-level prompt

Getting Help

help list all commands and built-in variables

help command briefly describe command

doc use Info to browse Octave manual doc command search for command in Octave manual

lookfor str search for command based on str

Motion in Info

SPC or C-v scroll forward one screenful DEL or M-v scroll backward one screenful

C-1 redraw the display

Node Selection in Info

select the next node select the previous node р select the 'up' node select the 'top' node select the directory node

select the first node in the current file select the last node in the current file reads the name of a node and selects it

C-x k kills the current node

Searching in Info

search for a string

C-s search forward incrementally search backward incrementally

search index & go to corresponding node go to next match from last 'i' command

Command-Line Cursor Motion

C-b move back one character C-f move forward one character C-a move to the start of the line C-e move to the end of the line M-fmove forward a word M-b move backward a word

C-1clear screen, reprinting current line at top

Inserting or Changing Text

| M-IAB | insert a tab character |
|-------------------|--|
| DEL | delete character to the left of the cursor |
| C-d | delete character under the cursor |
| C-v | add the next character verbatim |
| C-t | transpose characters at the point |
| M-t | transpose words at the point |
| surround optional | arguments show one or more arguments |

Killing and Yanking

C-k kill to the end of the line C-y yank the most recently killed text M-d kill to the end of the current word M-DEI. kill the word behind the cursor M-y rotate the kill ring and vank the new top

| Command Completion and History | | |
|--|--|--|
| TAB | complete a command or variable name | |
| M-? | list possible completions | |
| RET | enter the current line | |
| C-p | move 'up' through the history list | |
| C-n | move 'down' through the history list | |
| M-< | move to the first line in the history | |
| M-> | move to the last line in the history | |
| C-r | search backward in the history list | |
| C-s | search forward in the history list | |
| $\texttt{history} \; \big[\text{-q} \big] \; \big[N \big]$ | list N previous history lines, omitting | |
| г 1 | history numbers if -q | |
| history -w $[file]$ | write history to file (~/.octave_hist if no file argument) | |
| history -r $[file]$ | <pre>read history from file (~/.octave_hist if no file argument)</pre> | |
| edit_history lines | edit and then run previous commands from the history list | |

from the history list run_history lines run previous commands from the history

[beg] [end] Specify the first and last history commands to edit or run.

If beg is greater than end, reverse the list of commands before editing. If end is omitted, select commands from beg to the end of the history list. If both arguments are omitted, edit the previous item in the history list.

Shell Commands

cd dir change working directory to dir pwd print working directory ls options print directory listing getenv (string) return value of named environment variable system (cmd) execute arbitrary shell command string

Matrices

Square brackets delimit literal matrices. Commas separate elements on the same row. Semicolons separate rows. Commas may be replaced by spaces, and semicolons may be replaced by one or more newlines. Elements of a matrix may be arbitrary expressions, assuming all the dimensions agree.

 $[x, y, \dots]$ enter a row vector $[x; y; \dots]$ enter a column vector [w, x; y, z] enter a 2×2 matrix

Multi-dimensional Arrays

Multi-dimensional arrays may be created with the cat or reshape commands from two-dimensional sub-matrices.

squeeze (arr) remove singleton dimensions of the array. ndims (arr) number of dimensions in the array. permute (arr, p) permute the dimensions of an array. ipermute (arr, p) array inverse permutation.

shiftdim (arr, s) rotate the array dimensions. circshift (arr, s) rotate the array elements.

Sparse Matrices

sparse (...) create a sparse matrix. speye (n)create sparse identify matrix. sprand (n, m, d)sparse rand matrix of density d. spdiags (...) sparse generalization of diag.

nnz(s)No. non-zero elements in sparse matrix.

Ranges

base: limit base: incr: limit

Specify a range of values beginning with base with no elements greater than limit. If it is omitted, the default value of incr is 1. Negative increments are permitted.

Strings and Common Escape Sequences

A string constant consists of a sequence of characters enclosed in either double-quote or single-quote marks. Strings in doublequotes allow the use of the escape sequences below.

11 a literal backslash \" a literal double-quote character \, a literal single-quote character nnewline, ASCII code 10 \t horizontal tab, ASCII code 9

Index Expressions

var (idx) select elements of a vector var (idx1, idx2)select elements of a matrix

scalarselect row (column) corresponding to

scalar

select rows (columns) corresponding to the vectorelements of vector

select rows (columns) corresponding to the rangeelements of range select all rows (columns)

Global and Persistent Variables

global var1 ... Declare variables global.

global var1 = val Declare variable global. Set intial value. persistent var1 Declare a variable as static to a function. persistent var1 = Declare a variable as static to a function and set its initial value.

Global variables may be accessed inside the body of a function without having to be passed in the function parameter list provided they are declared global when used.

Selected Built-in Functions

EDITOR editor to use with edit_history

Inf, NaN IEEE infinity, NaN NA Missing value

PAGER program to use to paginate output last result not explicitly assigned ans

machine precision eps

рi π $\sqrt{-1}$

1i

realmax maximum representable value realmin minimum representable value

Copyright 1996, 1997, 2007 John W. Eaton Permissions on back

Assignment Expressions

| var = expr | assign expression to variable |
|----------------------|---------------------------------------|
| var (idx) = expr | assign expression to indexed variable |
| var (idx) = [] | delete the indexed elements. |
| $var \{idx\} = expr$ | assign elements of a cell array. |

Arithmetic and Increment Operators

| | - |
|-------------------|--|
| x + y | addition |
| x - y | subtraction |
| x * y | matrix multiplication |
| x .* y | element by element multiplication |
| x / y | right division, conceptually equivalent to |
| | (inverse (y') * x')' |
| $x \cdot / y$ | element by element right division |
| $x \setminus y$ | left division, conceptually equivalent to |
| | inverse (x) * y |
| $x \cdot \ y$ | element by element left division |
| x ~ y | power operator |
| $x \cdot \hat{y}$ | element by element power operator |
| - x | negation |
| + x | unary plus (a no-op) |
| x, | complex conjugate transpose |
| x ., | transpose |
| ++ x (x) | increment (decrement), return new value |
| x ++ (x) | increment (decrement), return old value |
| | |

Comparison and Boolean Operators

These operators work on an element-by-element basis. Both arguments are always evaluated.

```
x < y
                     true if x is less than y
x \le y
                     true if x is less than or equal to y
x == y
                     true if x is equal to y
x \ge y
                     true if x is greater than or equal to y
                     true if x is greater than y
x > u
x != y
                     true if x is not equal to y
x & y
                     true if both x and y are true
x \mid y
                     true if at least one of x or y is true
! bool
                     true if bool is false
```

Short-circuit Boolean Operators

Operators evaluate left-to-right. Operands are only evaluated if necessary, stopping once overall truth value can be determined. Operands are converted to scalars using the all function.

```
x \&\& y true if both x and y are true x \mid \mid y true if at least one of x or y is true
```

Operator Precedence

Table of Octave operators, in order of increasing precedence.

```
; , statement separators
= assignment, groups left to right
logical "or" and "and"
| & element-wise "or" and "and"

< <= == >= >!= relational operators
: colon
+ - addition and subtraction
* / \ .* ./ .\ multiplication and division
' .' transpose
+ - ++ --! unary minus, increment, logical "not"
exponentiation
```

Paths and Packages

| path | display the current Octave cunction path. |
|----------------------------------|--|
| pathdef | display the default path. |
| $\mathtt{addpath}(\mathit{dir})$ | add a directory to the path. |
| EXEC_PATH | manipulate the Octave executable path. |
| pkg list | display installed packages. |
| ${	t pkg load}\ pack$ | Load an installed package. |
| EXEC_PATH pkg list | manipulate the Octave executable path. display installed packages. |

Cells and Structures

| $var.field = \dots$ | set a field of a structure. |
|----------------------|--|
| $var\{idx\} = \dots$ | set an element of a cell array. |
| cellfun(f, c) | apply a function to elements of cell array |
| fieldnames(s) | returns the fields of a structure. |

Statements

for identifier = expr stmt-list endfor

Execute *stmt-list* once for each column of *expr*. The variable *identifier* is set to the value of the current column during each iteration.

while (condition) stmt-list endwhile

Execute stmt-list while condition is true.

| break | exit | $_{\rm innermost}$ | loop |
|-------|------|--------------------|------|
| | | | |

continue go to beginning of innermost loop

return return to calling function

if (condition) if-body [else else-body] endif
Execute if-body if condition is true, otherwise execute else-body.

if (condition) if-body [elseif (condition) elseif-body] endif Execute if-body if condition is true, otherwise execute the elseif-body corresponding to the first elseif condition that is true, otherwise execute else-body.

Any number of **elseif** clauses may appear in an **if** statement.

unwind_protect body unwind_protect_cleanup cleanup end

Execute body. Execute cleanup no matter how control exits body.

try body catch cleanup end

Execute body. Execute cleanup if body fails.

Strings

| strcmp(s, t) | compare strings |
|---------------------------|-------------------------------------|
| strcat (s, t, \ldots) | concatenate strings |
| regexp (str, pat) | strings matching regular expression |
| regexprep (str, pat, rep) | Match and replace sub-strings |

Defining Functions

ret-list may be a single identifier or a comma-separated list of identifiers delimited by square-brackets.

arg-list is a comma-separated list of identifiers and may be empty.

Function Handles

| Qfunc | Define a function handle to func. |
|--------------------|---|
| @(var1,) expr | Define an anonymous function handle. |
| str2func (str) | Create a function handle from a string. |
| functions (handle) | Return information about a function |
| | handle. |
| func2str (handle) | Return a string representation of a |
| | function handle. |
| handle (arg1,) | Evaluate a function handle. |
| feval (func, arg1, | Evaluate a function handle or string, |
|) | passing remaining args to func |
| Anonymous function | handles take a copy of the variables in the |
| current workspace. | |
| | |

Miscellaneous Functions

| eval (str) | evaluate str as a command |
|------------------------|---|
| error (message) | print message and return to top level |
| warning (message) | print a warning message |
| ${\tt clear}\ pattern$ | clear variables matching pattern |
| exist (str) | check existence of variable or function |
| who, whos | list current variables |

details of the varibale var

Basic Matrix Manipulations

whos var

| Basic Matrix N | vianipulations |
|----------------------|---|
| rows (a) | return number of rows of a |
| columns (a) | return number of columns of a |
| all (a) | check if all elements of a nonzero |
| any (a) | check if any elements of a nonzero |
| | |
| find (a) | return indices of nonzero elements |
| sort (a) | order elements in each column of a |
| sum (a) | sum elements in columns of a |
| prod (a) | product of elements in columns of a |
| min (args) | find minimum values |
| max (args) | find maximum values |
| rem (x, y) | find remainder of x/y |
| reshape (a, m, n) | reformat a to be m by n |
| diag(v, k) | create diagonal matrices |
| linspace (b, l, n) | create vector of linearly-spaced elements |
| logspace (b, l, n) | create vector of log-spaced elements |
| eye (n, m) | create n by m identity matrix |
| ones (n, m) | create n by m matrix of ones |
| zeros (n, m) | create n by m matrix of zeros |
| rand (n, m) | create n by m matrix of random values |
| | |

Linear Algebra

| chol(a) | Cholesky factorization |
|---------------|--|
| det (a) | compute the determinant of a matrix |
| eig(a) | eigenvalues and eigenvectors |
| expm (a) | compute the exponential of a matrix |
| hess (a) | compute Hessenberg decomposition |
| inverse (a) | invert a square matrix |
| norm(a, p) | compute the p -norm of a matrix |
| pinv (a) | compute pseudoinverse of a |
| qr (a) | compute the QR factorization of a matrix |
| rank (a) | matrix rank |
| sprank(a) | structrual matrix rank |
| schur (a) | Schur decomposition of a matrix |
| svd (a) | singular value decomposition |
| syl(a, b, c) | solve the Sylvester equation |

Equations, ODEs, DAEs, Quadrature

| *isolve | solve nonlinear algebraic equations |
|-------------------|--------------------------------------|
| *lsode | integrate nonlinear ODEs |
| *dassl | integrate nonlinear DAEs |
| *quad | integrate nonlinear functions |
| perror (nm. code) | for functions that return numeric co |

perror (nm, code) for functions that return numeric codes, print error message for named function

and given error code

* See the on-line or printed manual for the complete list of arguments for these functions.

Signal Processing

| fft (a) | Fast Fourier Transform using FFTW |
|--------------------|-----------------------------------|
| ifft (a) | inverse FFT using FFTW |
| freqz (args) | FIR filter frequency response |
| filter (a, b, x) | filter by transfer function |
| conv(a, b) | convolve two vectors |
| hamming (n) | return Hamming window coefficents |
| hanning (n) | return Hanning window coefficents |
| | |

Image Processing

| colormap (map) | set the current colormap |
|--------------------------|------------------------------------|
| gray2ind (i, n) | convert gray scale to Octave image |
| image (img, zoom) | display an Octave image matrix |
| imagesc (img, zoom) | display scaled matrix as image |
| imshow (img , map) | display Octave image |
| imshow (i, n) | display gray scale image |
| imshow (r, g, b) | display RGB image |
| ind2gray (img, map) | convert Octave image to gray scale |
| ind2rgb (img, map) | convert indexed image to RGB |
| loadimage (file) | load an image file |
| rgb2ind(r, g, b) | convert RGB to Octave image |
| saveimage (file, img, fr | nt, map) save a matrix to file |

C-style Input and Output

| open file name |
|--------------------------------|
| close file |
| formatted output to stdout |
| formatted output to file |
| formatted output to string |
| formatted input from stdin |
| formatted input from file |
| formatted input from string |
| read len characters from file |
| flush pending output to file |
| return file pointer position |
| move file pointer to beginning |
| print a info for open files |
| read binary data files |
| write binary data files |
| determine if pointer is at EOF |
| |

A file may be referenced either by name or by the number returned from fopen. Three files are preconnected when Octave starts: stdin, stdout, and stderr.

Other Input and Output functions

save file var ...save variables in fileload fileload variables from filedisp (var)display value of var to screen

Polynomials

| companion matrix |
|---|
| convolution |
| deconvolve two vectors |
| create polynomial from a matrix |
| derivative of polynomial |
| integral of polynomial |
| value of polynomial at x |
| value of polynomial at x |
| polynomial roots |
| partial fraction expansion of ratio a/b |
| |

Statistics

| corrcoef (x, y) | correlation coefficient |
|-------------------|-------------------------|
| cov(x, y) | covariance |
| mean (a) | mean value |
| median(a) | median value |
| std (a) | standard deviation |
| var (a) | variance |

Plotting Functions

| Plotting Funct | cions |
|---|-------------------------------------|
| plot (args) | 2D plot with linear axes |
| plot3 (args) | 3D plot with linear axes |
| line (args) | 2D or 3D line |
| patch (args) | 2D patch |
| semilogx (args) | 2D plot with logarithmic x-axis |
| semilogy (args) | 2D plot with logarithmic y-axis |
| loglog (args) | 2D plot with logarithmic axes |
| bar (args) | plot bar charts |
| stairs (x, y) | plot stairsteps |
| stem $(x, it y)$ | plot a stem graph |
| hist (y, x) | plot histograms |
| contour (x, y, z) | contour plot |
| $	exttt{title (}string)$ | set plot title |
| \mathtt{axis} ($limits$) | set axis ranges |
| xlabel (string) | set x-axis label |
| ylabel (string) | set y-axis label |
| ${	t zlabel}$ ($string$) | set z-axis label |
| text (x, y, str) | add text to a plot |
| legend (string) | set label in plot key |
| $\operatorname{\sf grid} \left[\operatorname{on} \middle \operatorname{off} \right]$ | set grid state |
| hold on off | set hold state |
| ishold | return 1 if hold is on, 0 otherwise |
| mesh(x, y, z) | plot 3D surface |
| meshgrid (x, y) | create mesh coordinate matrices |
